Clinical Research Fellowship Opportunities
Department of Oncology

The Department of Oncology at McMaster University has several clinical research fellowship positions available in Medical Oncology, Radiation Oncology and Malignant Hematology. McMaster University is one of Canada’s top ranked research-intensive universities and the Faculty of Health Sciences is a major contributor with more than $100 million in research funding being overseen by health sciences investigators. In addition, the Faculty of Health Sciences is partnered with the Hamilton Academic Health Care Network which provides care to Hamilton, Central West and North-Western Ontario, serving more than 2.2 million people. The Department of Oncology is located at the Juravinski Cancer Centre, Hamilton, Ontario and offers one of the largest cancer treatment services in Ontario. Over 5,000 new patients are referred to the centre each year by physicians in the region.

**Duration:** 1 - 2 year Fellowships

**Start Date:** July 1, 2011

**Funding:** Available at the PGY6 ($76,210) level

**Deadline Date for Applications:** October 1, 2010

Invitations for interviews will be given to selected applicants. Incomplete applications will not be accepted.

The one-year Clinical Research Fellowship provides fellows with a focused and high-level clinical experience in one or two disease sites. Fellows are expected to take the HRM 721 – Fundamentals of Health Research & Evaluation Methods course in the Health Research Methodology Program at McMaster University. The course will cover the basic concepts in formulating a research question, literature reviews, study designs, selection of study populations, choice of measuring instruments, research ethics and knowledge translation. The course will provide students the opportunity to develop a research question and determine the appropriate research methods. Research designs that will be discussed include randomized clinical trials, cohort and case-control designs, qualitative methods, health technology assessment and the evaluation of diagnostic test properties.

The two-year Clinical Research Fellowship provides fellows an opportunity to obtain a Master’s of Science Degree in Health Research Methodology (HRM). The degree includes six half-courses and with the option to do a thesis. In general, each course meets for one half-day per week, with the need for about three to five hours of outside preparation per hour of class time. The three basic courses are an introduction to clinical epidemiology, an introduction to biostatistics, and a course on research methodology, in which students learn how to prepare a research protocol. In addition, HRM students participate in research internships designed to provide practical experience in clinical research. One project involving the planning and execution of data analysis is required at some point during the HRM program. The thesis may be a “design” thesis, in which the candidate designs a study in his/her area of interest, including the implementation and analytic strategies, while considering and addressing the relevant methodological issues. Although conducting the study is not a requirement of the thesis, fellows are strongly encouraged to choose projects which they would actually like to carry out. Often the thesis forms the basis of a grant proposal that can launch the next phase of career development as a clinical investigator. Deadline date for registration to the HRM Program is November 1, 2010. For more information please visit: [http://fhs.mcmaster.ca/hrm/about.html](http://fhs.mcmaster.ca/hrm/about.html)
Medical Oncology Clinical Research Fellowship
Opportunities exist within the Division of Medical Oncology for Clinical Research Fellowships to develop subspecialty expertise. This is a large division with 29 full and part time medical oncologists all with subspecialty interests. The Juravinski Cancer Centre has one of the largest Clinical Trials departments in Canada and is a leading accruer to Cooperative Group and Industry sponsored Phase I, II and III clinical trials. Existing Fellowship opportunities include Breast and Lung cancer as well Investigational New Drug (IND) development. Opportunities for clinical research fellowships would also be considered in GI and GU malignancies, clinical genetics and malignant hematology.

For more information on the IND Fellowship please click on link below:

Radiation Oncology Clinical Research Fellowship
The primary objective of this 1-2 year program is to provide training and research opportunities in technological advances in radiation therapy. The successful candidates will study applications of IMRT, high dose rate brachytherapy and other new technologies, including Stereotactic Radiosurgery with the Cyberknife Treatment System for the treatment of breast, prostate, lung, esophageal, head and neck and central nervous system. Training will be provided in principles and methods of scientific research in the areas of clinical trials and health services research including technology evaluations in radiation oncology.

Application Requirements:

1. Must have completed a subspecialty in Medical Oncology, Radiation Oncology or Hematology
2. CPSO licensing to practice in the Province of Ontario
3. Curriculum vitae - include information on teaching and research positions, list of publications, certificates, awards, scholarships, memberships, etc
4. Three appropriate professional letters of reference, one from the Residency Program Director
5. Covering letter outlining personal learning goals and preliminary thoughts for development of a research/clinical project
6. Medical School transcripts

Forward completed application no later than October 1, 2010 to:
