Competency Based Medical Education: Next Steps …

Monday October 3, 2016  11.30-4:00

LOCATION CHANGE:
McMaster Innovation Park, 1-CD
105-175 Longwood Rd S, Hamilton ON L8P 0A1

Lunch will be served prior to presentations

Competency-based medical education (CBME) is an outcomes-based approach to the design, implementation, assessment, and evaluation of a medical education program using an organizing framework of competencies. Competence by Design (CBD) is the Royal College’s multi-year, medical education, transformational change initiative aimed at implementing a CBME approach to education and assessment to residency training and specialty practice in Canada. The goal of CBD is to enhance patient care by improving learning and assessment across the continuum (from residency to retirement), ensuring physicians have the skills and behaviours required to continuously meet evolving patient needs.

This event has been especially geared towards our faculty and residents and is sponsored by the Department of Pathology and Molecular Medicine.

At the end of this event, participants will be able to:

• Understand the practical implications and applications of competence based medical education in the curriculum
• Actively participate in the development of a departmental strategy for the implementation of competence based medical education within their specialty
• Apply the identified strategies for competence based medical education into their curriculum, teaching and assessment of students
• Identify any on-going or future gaps in the teaching and assessment of residents and apply learned strategies

Please contact Norma (stewarn@mcmaster.ca) with your attendance or regrets by September 1st
