Public and Patient Engagement Evaluation Tool: IMPLEMENTATION STUDY
Purpose:
To test the feasibility of implementing the Public and Patient Engagement Evaluation Tool (PPEET) in different settings.

Guiding research questions:

a) What are the facilitators and barriers to implementing the PPEET in organizations with different mandates?

b) Can a common set of ‘core’ questions can be administered across each of these organizations?

c) How does the tool need to be adapted to the different contexts, mandates and populations served by these organizations?

d) What supports are needed to facilitate the use of the PPEET across the health system?
What is the PPEET?

The PPEET is a set of three evaluation questionnaires aimed at three respondent groups and built around four principles of quality engagement:

1) Integrity of design and process  
2) Influence and impact  
3) Participatory culture  
4) Collaboration and common purpose

**PARTICIPANT QUESTIONNAIRE**
Patients/citizens/users in various engagement activities and roles (partners, advisors, participants)

**PROJECT QUESTIONNAIRE**
Staff responsible for the design and implementation of engagement activities

**ORGANIZATION QUESTIONNAIRE**
Leadership responsible for development capacity for and culture of PPE within the organization
There are seven different health organizations participating in the implementation of 3-4 activities each:

- Cancer Care Ontario
- Children’s Hospital of Eastern Ontario
- Hamilton Health Sciences
- Health Quality Ontario
- NorWest Community Health Centres
- Toronto Central LHIN
- University Health Network
How are patients involved?

1) Patient advisors and participants are assessing the usability of the evaluation questionnaires

2) Patients from each partner organization contribute at key stages of the study (e.g., initial launch, review of interim results, modifications to the questionnaires) through membership on the Study Advisory Committee

Value of this research:

1) Building PPE evaluation capacity in health system organizations

2) Informing and improving PPE practice

3) Providing opportunities for patients to contribute to the evaluation of PPE
