

## Suggested debriefing questions

As previously noted, if a standardized patient was involved in this station, ask him/her to participate in this debriefing session and offer their feedback on how they felt as a patient (i.e. did particular team members make them feel more at ease than others, was anything said/done that they felt was inappropriate).

Other discussion points/questions:

1. How do you feel you did as a team?
2. Did you learn anything new about each other (specifically your role in patient care)?
3. Were there any red flags noted that the observer(s) would like to discuss with the team?
4. From the team's perspective, were there any areas for improvement identified (either as a team or from an individual)?

Note for observer – this is not meant to be an attack on any team member – it is your job to make sure the discussion remains as a constructive feedback session.

5. From the observer's perspective, were there any areas for improvement identified (either as a team or from an individual)?

Reminder – this should be constructive feedback
