May 2013

Resveratrol and Cardiovascular Health: Too Good to be True?

Presented by Jason Dyck, PhD

On Thursday May 23rd, 2013, the Canadian Obesity Network – Students and New Professionals Chapter at McMaster University (CON-SNP@Mac) invited Dr. Dyck from the University of Alberta to speak about his research regarding Resveratrol and cardiovascular health. Dr. Dyck’s other research interests include: energy metabolism with regards to obesity, skeletal muscle insulin, diabetic cardiomyopathy, hypertension and heart failure. Dr. Dyck is also the co-director of the Alberta HEART program, which promotes the understanding and treatment of diastolic heart failure.

The purpose of the EMPhasis on Health seminar series initiative by CON-SNP@Mac is to unify students and new professionals with a broad range of interests in energy metabolism, physiology, nutrition and/or obesity. These seminars provide a comfortable atmosphere to encourage networking and interdisciplinary research exchange amongst new or established scientists, including graduate students, faculty members, clinicians, health practitioners and undergraduate students.

If you are interested in learning more about CON-SNP@Mac, please visit our website: http://fhs.mcmaster.ca/con-snp/index.html. To receive notifications of our meetings, please e-mail conmac@mcmaster.ca, join our Facebook group (CON-SNP@McMaster University) or follow us on Twitter at CONSNPMac.
