

TST CONVERSION REPORT

Jul 2020

Please submit to the Health Screening; instructions can be found on Health Screening website:

<https://fhs.mcmaster.ca/healthscreening/formsandsubmission.html>

Health Screening Office contact: hrsadmin@mcmaster.ca, 905-525-9140 ext 22249

Students with previous negative TB tuberculin skin testing (TST) who subsequently convert to a positive TST during their program are required to complete this form.

N.B. Students with NEW positive TST must withdraw from clinical activities and report the result to their Program Manager the Health Screening Office immediately; the Health Screening Office will determine when students may return to clinical activities.

Provide documentation of the positive TST and a chest x-ray report (if not already submitted). A medical assessment should be performed under the direction of a physician. In the absence of active TB disease, a referral should be considered for assessment and treatment of latent TB infection. Students with a negative chest x-ray and no symptoms of active TB disease will be fully cleared for participation in clinical activities.

Symptoms of active TB disease include:

- persistent cough lasting three or more weeks
- hemoptysis (coughing up blood)
- night sweats
- unexplained or involuntary weight loss

Do you currently have any symptoms of active TB disease listed above?

NO

YES – Letter from a physician required.

Student name (last): _____ (first): _____
